

CTD — Expression Balance

“Balance” looks only at edges containing `increases^expression` vs `decreases^expression` anywhere in `action_norm`. We ignore generic “affects^expression/response” noise. A row is skewed when one side $\geq 70\%$ of its increase/decrease total.

Sentinel genes (TP53, APOE, PCSK9)

gene_symbol	inc_expr	dec_expr	total_expr	net_expr	inc_pct	dec_pct	balance_flag
APOE	0	0	0	0			none
PCSK9	0	0	0	0			none
TP53	0	0	0	0			none
